

Bioenergy in Florida

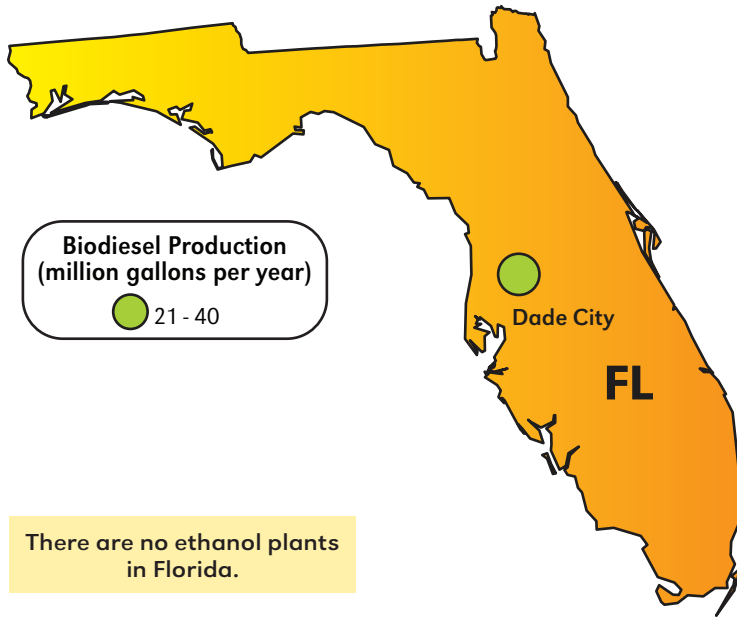

from the Southern Bioenergy Roadmap

The Southern Bioenergy Roadmap established that the South is in a unique position to create thousands of jobs through applying abundant natural resources and intellectual capital to the production of electricity and automotive fuel from plants, trees and waste – also known as biomass. Download the report at <http://www.saferalliance.net/projects/roadmap.html>.

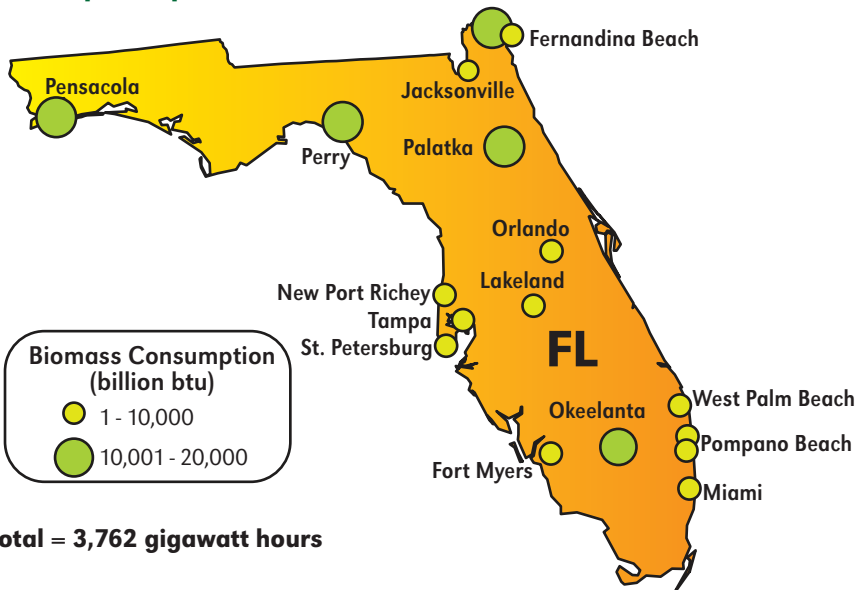

Locations and capacities of current biodiesel plants

There are no ethanol plants in Florida.

Bioenergy Research Assets

- ◆ Applied Research Associates
- ◆ Common Purpose Institute
- ◆ Florida Institute of Technology
- ◆ Florida International University
- ◆ Sigarca, Inc.
- ◆ University of Central Florida
- ◆ University of Florida, Gainesville and 13 Research and Education Centers throughout Florida

Projected Population Growth 2007-2030

Florida — 57%

South — 26%

U.S. — 21%
